

ENTRY-SENIOR
PROJECT DESIGNER
LANDSCAPE
ARCHITECTURE

Project Designers are the primary creative force across all projects in the studio. They are empowered to be collaborative with the Design Directors and Project Managers from early concept through construction documentation and construction administration. Our designers contribute contextual and regenerative research, graphics modeling and rendering, conceptual design and documentation to support and elevate the overall design vision. We are committed to developing our designers into complete landscape architects with a comprehensive understanding of the entire profession.

Preferred candidates will have the following attributes

- 1-8 years of design experience
- Ability to take proactive ownership of projects and responsibilities
- Ability to thrive in collaborative team environment and work independently
- Developed understanding an approach to contemporary and contextual based planning and design
- Strong conceptual thinking with an ability to communicate ideas graphically, verbally, and in written form
- Experience working on all stages of a project, from concept design through construction documentation
- Passion for blue-green regenerative systems
- Basic understanding of construction techniques and documentation systems
- Discipline and confidence in complex problem solving
- Desire and ability to travel internationally
- Capacity to work across multiple representation platforms, including hand graphics (sketches + renderings); AutoCAD; Revit; Illustrator; InDesign; Photoshop; Rhino; and SketchUP
- Master's Degree in Landscape Architecture, Architecture, Planning, or Urban Design from an accredited Program (Bachelor's degree will be considered for right candidates)
- Must be passionate about design excellence

Responsibilities

- Support project managers in the coordination of multi-disciplinary design teams
- Develop meaningful research and analysis of physical and cultural context to support design concepts; and products, planting, and materials to support detailed design development
- Develop conceptual ideas through clear direction, independently and in collaboration with others
- Support the development of project graphics, diagrams, presentations, renderings, and physical models
- Support the presentation of design concepts to clients, government agencies, and stakeholders
- Support the design and implementation of public meetings and community engagement efforts
- Develop conceptual design ideas into schematic plans
- With support, develop schematic drawings into construction documents and specifications
- Review and refine construction documents through quality control processes
- Support the construction administration process, including site visits, field reports, material selections, mock-up reviews, etc.
